

Sky Commercial / Flats Etc

How to operate 5 or more Sky receivers from 1 Satellite dish

[Return to Website Click here](#)

Dish pointed at Sky Astra Satellite, 28 degrees East of South

Quattro 4 output LNB
This provides 1 satellite signal split into the 4 Sky wavebands.
Not to be confused with the Std Sky 4 out LNB's.

4 X CT100 satellite cables from LNB
1 X High Band Vertical
1 X High Band Horizontal
1 X Low Band Vertical
1 X Low Band Horizontal
The above wavebands are marked on the Multiswitch And the Quattro LNB

[Click on any picture for product description](#)

Single Satellite Faceplates shown, if combining TV Aerial use TV/Sat Diplexer Faceplates. Two cables from Faceplates to each Sky receiver will then be required.

Optional TV aerial
Can also be inserted

Multiswitch Combines signals, then provides 8 or more Outputs as shown.
